

Slide 1: Three-Schema Architecture

23IT201 • Database Management Systems • Module 2: Database Architecture

Divides the database into External Schema (User Views), Conceptual Schema (Logical Design), and Internal Schema (Physical Storage).

Slide 2: Data Independence

23IT201 • Database Management Systems • Module 2: Database Architecture

Logical Data Independence enables changing the conceptual schema without altering view schemas. Physical Data Independence enables changing physical storage without altering conceptual schemas.

Slide 3: Client-Server & Multi-Tier DBMS

23IT201 • Database Management Systems • Module 2: Database Architecture

Modern DBMS systems separate user interfaces (frontend), application servers (business logic), and database engines (data store).
